QUARTERLY REPORT

[REDACTED]

25X1

PAR 215

26 Feb 65

SUBJECT: Roller Transport Processor (24-Inch)

TASK/PROBLEM

1. Design and fabricate a self-threading photographic processor capable of processing cut sheets up to 24 inches wide; the machine to be darkroom operating.

DISCUSSION

2. During this reporting period (30 Nov 64 through 26 Feb 65), all items required to build the processor were released for fabrication.

3. On 17 December 1964, a trip was made to the customer's facility to ascertain room location and size for the equipment and to discuss any problem related thereto. At this time, a further requirement of the machine was indicated. The dry end of the machine is required to be in a lighted, dry area.

4. Installation drawings were prepared and submitted to the customer. These drawings show the location of the machine in the room, the location of service lines and the means of locating the dry end of the machine in a lighted dry area.

5. Heat load and air discharge data were transmitted to the customer in the Monthly Report, [REDACTED] dated 22 January 1965.

6. The fabrication schedule appears to have slipped about two weeks, however, we are not prepared to predict at this time whether the previously anticipated delivery date (12 July 65) will be affected.

7. Briefing aid sketches have been submitted for customer approval.

PLANNED ACTIVITY

8. Complete fabrication, mechanical and chemical checkout subsequent to delivery.
